

# CROWD MANAGEMENT SOLUTION

AI-POWERED INSIGHTS FOR SAFER, SMARTER PUBLIC GATHERINGS

## OVERVIEW

Our AI-driven Crowd Management System provides real-time monitoring and analytics for large gatherings, public events, and high-density congregations. Using advanced video analytics and camera-based intelligence, it counts individuals, measures crowd density, and tracks flow direction across multiple zones. A centralized dashboard delivers actionable insights, enabling administrators to ensure safety, optimize crowd movement, and make efficient decisions during peak events.

## KEY FEATURES

- 1 Real-Time Crowd Monitoring – Track live crowd density and movement across different zones.
- 2 AI-Based Analytics – Detect sparse or dense areas automatically for proactive crowd management.
- 3 Smart Dashboard – Unified interface for monitoring, alerts, and operational decision support.
- 4 Scalable Architecture – Easily deployable across multiple cameras and event locations.
- 5 Enhanced Safety & Control – Prevent overcrowding and improve emergency response.
- 6 Data-Driven Insights – Generate reports and trends to support future event planning.
